

Dear Customer

- To prevent damages please avoid the ELECTRONIC SCALE being exposed to any hostile environment!
- For maintenance it does not need a lot of the preservative-spray ENAVIT N, do not apply too much of it at once! Best is to simply spray the liquid onto a lintfree cloth by pressing the head of the bottle once or twice (not more!). Apply and distribute the preservative-liquid by moving the cloth over the steel rod without pressure.
- Do not put the used cloth into the wooden storage case!
